OBJECTIVE

B. Tech IT student (3rd year) with hands-on experience in penetration testing, vulnerability assessment, and SOC-style incident triage. Built and deployed three security tools tested in lab environments using Kali Linux. Solved 100+ CTF challenges on TryHackMe, Hack The Box, and picoCTF. Cisco Certified Ethical Hacker (2026). Looking to apply offensive and defensive security skills in a real-world internship.

SECURITY PROJECTS

AI-Enabled-Cyber Threat Detection & Incident Reporting System | *Python · ReactJS · RSA · REST API Git link*

- Built a full-stack platform on a local Kali Linux environment to detect phishing URLs, flag suspicious file hashes, and log security events in real time — tested against 30+ simulated attack scenarios
- Implemented RSA asymmetric encryption for all API communication; backend built in Python Flask, frontend in ReactJS for SOC-style alert triage dashboard
- Covered OWASP Top 10 detection categories including SQLi, XSS, and broken authentication — validated using DVWA and bWAPP test environments

AI-Web Analyzer — URL & Website Security Assessment Tool | *TypeScript · Python · MongoDB · Gemini API Git link*

- Built an automated URL threat scanner that detects phishing indicators, domain spoofing, and security misconfigurations — tested against 50+ real-world malicious URL samples from PhishTank
- Integrated Gemini API for threat classification; MongoDB used for scan logging and pattern tracking across multiple sessions
- Identified exposed admin panels and misconfigured HTTP headers during testing on intentionally vulnerable web apps

Password Strength & Breach Detection Auditor | *Python · Streamlit · NumPy · HaveIBeenPwned API Git link*

- Developed a password auditing tool that calculates entropy, detects dictionary and pattern-based weaknesses, and checks against breach databases via the HaveIBeenPwned k-Anonymity API
- Applied NIST SP 800-63B guidelines for scoring logic; tested with 200+ sample passwords across strength categories; deployed locally via Streamlit

TECHNICAL SKILLS

Offensive	Penetration Testing, VAPT, Vulnerability Assessment, Reconnaissance, Enumeration
Defensive	SOC Triage, Threat Detection, Incident Response, Network Defense, Endpoint Security
Tools	Burp Suite – XSS & SQLi testing in DVWA labs Nmap – Network scanning & service enumeration Wireshark – Packet analysis during attack simulations Metasploit – Exploitation testing in controlled lab setup
Dev & OS	Python, Linux CLI (Bash), ReactJS, TypeScript, MongoDB, REST APIs, Kali Linux

CERTIFICATIONS & CTF ACTIVITY

Cisco Networking Academy (2025) — Endpoint Security, Network Defense,Ethical Hacker,Network Basics, Junior Cybersecurity Analyst Career Path Exam

TryHackMe Certifications (2025) — Networking Fundamentals, Linux Fundamentals

CTF 100+ challenges solved across picoCTF, TryHackMe, and Hack The Box — web exploitation, binary analysis, forensics, cryptography, and network capture challenges

EDUCATION

Kongunadu College of Engineering & Technology · B.Tech, Computer Science & IT · 2023–2027 · CGPA: 7.8 / 10
